Presentation Tips: Outline

Before you start creating slides in a presentation program (such as PowerPoint), decide on a **title** and create an outline of the **major points** you want to include.
Keep your outline points, and eventually your number of slides limited.

Too many main points and too many slides can be overwhelming for your audience.
Your slides **won’t contain everything** you will be saying when you show your presentation to an audience.

**You** will be presenting, not your slides!
